[NAME]
Subtle Em,, [HOSPITAL]

|

lane? [NAME]: [DATE] MARSOUD
Patient ID: [DATE]

[HOSPITAL]: 347418

MRI, [HOSPITAL] OF THE [HOSPITAL]:
TECHNIQUE:

Sagittal T2WI

Axial 'T2 and [HOSPITAL]

Coronal TAWL

8D TOF MRA.

3D venography through [HOSPITAL] technique
FINDINGS:

1 [HOSPITAL]

= Large irregular shaped areas of recent infarctions seen involving the right temporo-occipital lobes and the right thalamic region. They show restricted diffusion with no blood products signal.

= Left basal ganglia irregular shaped area of [HOSPITAL] like signal with surrounding gliosis denoting encephalomalacia of old insult.

= Prominent cortical brain sulci with widened extra-axial [HOSPITAL] spaces and widened sylvian fissures.

= Voluminous supratentorial ventricular system with no hhydrocephalic changes or deformity.

» <NRP>-ventricular deep white matter sheets and patches of high signal intensity in [HOSPITAL] seen denoting small vessels [NAME].

+ No parenchymal areas of fresh blood signal or its degradation products.

+ The cerebellum and brain stem are also normal

= No extra axial collections.

- MRA
