

FINDINGS!

()))/ MAROE THE [HOSPITAL]

Axial aiffusion study,
Sagittal T2Wis.

Axial TL, T2and FLAIR ANS,
Coronal TAWts.

No areas of diffusion restriction (no MRI evidence of acute stroke)
[LOCATION] temporal lobe subcortical small cystic lesion with [HOSPITAL] like signal
with surrounding gliosis (likely old insult).

[NAME] thin sheet of high T2 and [HOSPITAL] signal are seen.
Bilateral frontal and parietal small periventricular and subcortical foc
of high T2 and [HOSPITAL] signal are seen neither surrounded by e
nor exerting mass effect. Some of the foci show CSF like signal
Prominent cerebral ventricles and mildly dilated cortical sulci a
extra axial [HOSPITAL] spaces.

Normal size and! parenchymal signal intensity pattern of
cerebellum, and brain stem.

No shift of the midline structures.

No intra or extra axial S.O.Ls,

No extra-axial collections.

Intact cranio-cervical junction.

OPINION:

Small left temporal old infarct.

@ Small artery disease with bilateral cerebral ischemic foci and old

[NAME] infarcts.

© [HOSPITAL] involutional changes.

Much obliged
Dr. [NAME], [LOCATION]
