x _ STARE ATR HC NAL a wee

Complete occlusion of the right PCA seen explaining the right posterior recent infarction,

Attenuated peripheral branches of cerebral arteries with beaded appearance of their lumen denoting atherosclerotic changes.

Patent normal caliber internal carotid and both anterior and middle cerebral arteries, No evidence of stenotic segments, vessel occlusion or vascular malformation

Patent average caliber of the basilar and left posterior cerebral arteries with no evidence of vessel occlusion or segments.

_[HOSPITAL]

fenotic

= [HOSPITAL] right transverse and sigmoid dural venous sinuses with no signs of sinus thrombosis (normal anatomical variant).

= Normal MR appearance of the superficial and deep cerebral veins.

+ Normal rest of dural venous sinuses of the brain.

= No evidence of thrombosis, filling defects or vascular malformation.

OPINIO

+ Right PCA occlusion with thalamic and tempore" occipital recent non-hemorrhagic infarction.

+ Left basal ganglia old insult.

+ Age related involutional brain changes. ii
