ED ABD [NAME] |
[DATE] AND MRA EXAMINATION OF THE [HOSPITAL]:

TECHNIQUE:

+ Sagittal T2W1
[HOSPITAL]
+ Coranat T1W1
= 3D TOF MIRA

FINDINGS:
EMRE

«A well-defined intra-axial right thalamic hematoma Soon displaying
jsointense signal in [LOCATION] and dark signal in T 2 [HOSPITAL]'s denoting acute blood
products signal. ([HOSPITAL]). It measures about 24 x 27 mm in
dimensions and showing jntra-ventricular extension reaching the
fourth ventricle.

= Left posterior temporo-parietal cortical/subcortical old infarction
seen with [HOSPITAL] like signal and associated underlying gliotic tissues.

= [LOCATION] radiate and centrum semloyale old lacunar infarcts
seen.

«prominent cortical brain sulel with widened extra-axial [HOSPITAL] spaces
and widened sylvian. fissures.

«= Voluminous supratentorial ventricular system with no hydr 'cephalic
changes or deformity

= peri-ventricular deep white matter sheets and patches of high signal
iaeorvang le [NAME] iS ee denoting small vessels
jeukoencephalopathy.

= The cerebellum and brain stem are also normal

No extra axial collections.
